

TITLE IX REPORT

School Athletic Equity Act

20-21SY

THE 3-PART TEST

- 1. Proportionality
 - This test looks at the number of male and female students enrolled that is proportional to their overall representation in the student body. This means that if a school is 50% male and 50% female, and the athletics are also split 50/50 or close to it..the school is generally in compliance with Title IX. If the student body at large is 50/50, but the athletics programs are 30% female and 70% male, the school is not in compliance.
 - In order to comply, the schools should ideally boost the female athletics programs by adding new teams and opportunities.

3-PART TEST (CONT...)

- 2. Expansion
 - This test looks at if the school has a history of fewer programs and opportunities for female students, but they can show that they are working to expand their female athletics programs, they would be seen as complying with Title IX. As long as the expansion is in line with the interest female student athletes have shown in joining athletics programs, the school meets Title IX's requirements even if they are still behind having equal male and female programs.

3-PART TEST (CONT...)

- 3. Accommodating
 - This test looks at if the programs are not equal, and they are not currently being expanded to meet student interests, then a school can show they are complying with Title IX by showing that they already meet the interests of the students. If schools run surveys and take input from female students and they are essentially satisfied with having fewer athletics opportunities, then it is not considered a Title IX violation.

Bloomfield HS Total Enrollment v Athletic Participation

Bloomfield HS: 20-21SY

Total Enrollment: 698

Male students: 342
